Next catalyst	Q3'26 earnings, ~Nov 4	Analyst consensus	Hold (1–2 analysts), PT ~\$66.50

Green Brick is the highest-margin homebuilder in our peer set — 29–31% homebuilding gross margins against a peer field in the low-to-mid 20s — with a fortress balance sheet (11% debt-to-capital), 16% ROE, and an owner-operator register led by David Einhorn's Greenlight (24%). It is, in our judgment, the best-run small-cap builder we cover. We are still telling you to sell it. Our hardened 10-year free-cash-flow DCF prices the equity at **\$41 against a \$66.66 quote — 38.5% downside** — and no scenario in the model lets a buyer at today's price break even with any margin of safety. The gap is cash, not quality: TTM free cash flow was \$112M against \$315M of net income, because the owned-land model that produces the margin edge consumes roughly two-thirds of reported earnings in land reinvestment. The market prices builders on P/E and P/B, and on those lenses the stock looks fair; our DCF says that lens is the mispricing. This is research analysis, not personalized investment advice.

Bottom line: a quality company at a price the cash can't support. SELL; we would re-rate to HOLD on weakness toward our \$41 fair value, and to BUY only below ~\$34.

1 Investment Thesis

Green Brick Partners is a Plano, Texas-based homebuilder and land developer — the third-largest builder in Dallas-Fort Worth — running an unusual model in a commodity industry: it buys and self-develops land in infill and infill-adjacent submarkets, owns ~76% of its ~49,000-lot pipeline (peers lean on options), and prices for margin over volume. The result is the best profitability profile among U.S. builders we track: peer-leading gross margins, mid-teens ROE, and leverage the large caps would envy.

Margin leadership is real, but it is narrowing. Homebuilding gross margin ran 30.9% → 33.8% → 30.5% (FY23–FY25) and printed 29.8% in Q2 2026, down 150 bps YoY (+90 bps sequentially) as the entry-level

Trophy brand grows to ~52% of sales and incentives run 9–10% of closings revenue. The bear case is that Trophy permanently dilutes the franchise margin toward the peer average; the bull case is that owned infill land keeps margins structurally above peers through the cycle.

Orders have inflected; the P&L has not yet. Q2 net new orders jumped 19% YoY with sales pace up 10% to 3.3/month, yet closings revenue fell 11.4% and EPS declined 9.5% — the construction cycle means revenue lags orders by 6–9 months. Backlog is still down 24% YoY. The turn is visible in orders; it must be confirmed in closings and margins.

The balance sheet is the moat's bodyguard. Homebuilding debt-to-capital of 11.2% (6.1% net), \$262M of senior notes at 3.4%, no revolver draw, \$462M of liquidity — Green Brick can fund its ~\$820M 2026 land program and buy back stock (\$150M authorization) without touching the capital markets. Book value compounded 16% YoY to \$44.82.

Alignment is exceptional; liquidity of the thesis is not. Einhorn/Greenlight own 24%, CEO Brickman 4.5% — but that same concentration is an overhang (registration rights are in place), coverage is one to two analysts, and 6.3% of the float is short. Expect sharp moves around prints: the stock fell 2% on a 19% Q2 EPS beat.

Valuation is the problem: the DCF says \$41. A hardened 10-year FCF DCF (12% base discount for beta 1.8, DFW concentration, and cyclical; terminal 2.5% on normalized mid-cycle margins) returns a weighted \$41: bear \$7.41, base \$41.10, bull \$74.58. TTM free cash flow (\$112M) is roughly one-third of net income (\$315M) — the owned-land model consumes two-thirds of earnings in land investment. Structural caveat, disclosed: the market prices builders on P/E and P/B, and if that lens persists our DCF understates market-clearing value; our view is that the market's lens is the mispricing. Even the bull case sits just 12% above the quote and falls below it on any discount-rate wobble.

Why SELL and not HOLD: the old note ran four earnings-and-book lenses that converged at \$65–\$73 and called the stock fairly priced. All four capitalized earnings that only partly become cash. The rebuilt model discounts cash, and cash says the stock is 38.5% overpriced. At \$66.66 you are paying a multiple of earnings the land bank will not let you collect.

2 What the Company Does

Founded in 2008 (public via a 2014 reverse merger involving Greenlight affiliates and co-founder/CEO Jim Brickman) and headquartered in Plano, Texas, Green Brick Partners builds and sells single-family homes and townhomes and develops the land beneath them. With ~620 employees and ~3,943 closings in 2025, it is a regional builder with a national-quality balance sheet.

Operating footprint (company disclosure, Q2 2026):

Market	Presence	Note
Dallas-Fort Worth, TX	Core; 3rd-largest builder	~80% of closings revenue from infill / infill-adjacent locations
Austin, TX	Ramping	Trophy's Prairie Winds: 1,093 homesites, opening in phases
Houston, TX	New entry	First sales Q1 2026; first deliveries Q2 2026
Atlanta, GA	50% of Providence Group	OBIE Gold awards, Nov 2025
Treasure Coast, FL	80% of GHO Homes	Builder of the Year, 6th straight year

The economic engine is the **self-developed land model**. Green Brick acquires raw land in high-demand submarkets and develops it through its own builder brands, capturing the developer margin as well as the builder margin. At December 31, 2025 it owned or controlled 48,828 lots (75.8% owned; ~12.4 years of supply at current closings) and plans ~\$400M of land/lot acquisitions plus ~\$420M of development in 2026. Owning land — rather than optioning it like the nationals — is the source of both the margin edge and the balance-sheet risk: in a land-price downturn, impairments hit book value directly.

The company also runs captive **financial services** — Green Brick Title, GRBK Mortgage (funding since Dec 2024), and Green Brick Insurance — broken out as a separate segment from Q1 2026. The mortgage arm funded 521 loans in Q2 (+257% YoY); it supports sales pace and captures financing spread, but remains small (Q2 revenue \$12M, pretax \$5.7M).

Governance: Chairman **David Einhorn** (24% beneficial ownership; Greenlight's largest disclosed position at ~\$758M) and CEO **Jim Brickman** (4.5%) give rare owner-operator alignment — and a genuine blockholder overhang, since Greenlight holds effective registration rights. **Jed Dolson**, with the company since 2013 running land acquisition and Trophy, becomes Co-CEO on October 15, 2026 in a planned succession. Note: GRBK is **NYSE-listed** (transferred from Nasdaq in Dec 2021; also on NYSE Texas since Aug 2025) and pays **no common dividend** — only the 5.75% Series A preferred.

3 Product Evaluation

Green Brick sells through five Texas builder brands plus its Atlanta and Florida affiliates, spanning entry-level spec to luxury. The portfolio is deliberately barbelled — and the barbell is tilting:

Brand	Segment	Indicative pricing	Assessment
Trophy Signature Homes	Entry-level, mostly spec	Aubrey TX: \$325k–\$420k (Nov 2025); Hutto/Austin from \$320ks	Growth engine — 51–52% of Q1'26 sales; fastest inventory turns, thinnest margins
CB JENI Homes	Townhomes, DFW	From \$246,990 (Trophy Club)	Strong — lowest price point, infill townhome demand
Normandy Homes	Move-up SF	\$510k–\$850k (2021 deck; dated)	Stable — core DFW move-up, faces national competition
Southgate Homes	Luxury	\$760k–\$1.1M (2021 deck; dated)	Niche — high margin, low volume, cyclical
Centre Living (90%)	Urban townhome/SF	\$400k–\$800k (2021 deck; dated)	Positive — urban infill fits the land strategy
Providence (50%, ATL)	SF / condos	\$420k–\$1.0M (2021 deck; dated)	Stable — award-winning, non-controlled
GHO Homes (80%, FL)	SF / patio / townhome	\$320k–\$1.4M (2021 deck; dated)	Positive — 6× Builder of the Year

Three product dynamics matter for the investment case:

The Trophy mix shift is the whole margin story. Delivered ASP has fallen steadily — \$566k (2023) → \$547k (2024) → \$524k (Q3'25) → \$493k (Q1'26) → ~\$450k (Q2'26) — as Trophy's entry-level spec product takes share. Trophy converts owned land into closings faster than any other brand (volume, pace, cash conversion), but at structurally lower gross margins. Whether consolidated margins stabilize near 29–30% or grind toward the low-20s peer average is the single most important fundamental question in this note.

Spec building cuts both ways. Trophy builds primarily on spec, which shortens the order-to-close cycle and lets the company monetize land quickly in a 7%+ mortgage-rate world where buyers want rate buydowns and fast delivery. The cost is working-capital intensity and exposure if demand softens — spec inventory must be discounted, not re-negotiated.

Infill land is the product moat, such as it is. ~80% of closings revenue comes from infill/infill-adjacent locations where entitled land is scarce. That scarcity — not brand, not technology — is what defends pricing and margins at the community level. It is a local, perishable moat: it must be re-earned with every land deal.

4 Financial Situation

Green Brick compounded revenue at ~11% and EPS at ~17% from 2021–2025, peaked in 2024, and is digesting a margin-and-volume reset in 2026. Earnings have declined even as the company grows orders — the classic homebuilder timing mismatch.

\$ millions (FY ends Dec 31)	FY23	FY24	FY25	TTM*
Revenue	1,778	2,099	2,091†	~1,996
Homes delivered	3,123	3,783	3,943	—
Net new orders	—	3,681	3,795	—
Homebuilding gross margin	30.9%	33.8%	30.5%	29.8%‡
Net income (attrib.)	285	382	313	315
Diluted EPS	\$6.14	\$8.45	\$7.07	\$6.64
Operating cash flow	—	—	—	\$117
Free cash flow	—	—	—	\$112
Share buybacks	—	—	\$83	\$40
Book value / share	—	—	—	\$44.82
Debt-to-capital	—	17.2%	12.8%	11.2%

*TTM to June 30, 2026. †FY2025 revenue = record home closings revenue (company). ‡Q2 2026 print. **Accounting note:** FY2023–2025 income statements are being restated under ASC 606 (closing-cost incentives reclassified from cost of revenue to revenue reduction); economics, profit, and cash flow are unaffected, but originally reported revenue/ASP/margins for those years will be superseded by the pending amended 10-K. Sources: company press releases (businesswire), FY2025 10-K, TickerNerd.

The last two quarters, in detail:

Quarter	Q1 2026	Q2 2026	Signal
Revenue	\$448M (–7.1%)	\$494M (–11.4% clos.)	Volume soft; orders lead revenue
Net income / EPS	\$60.9M / \$1.39	\$74M / \$1.70 (–9.5%)	Q2 beat consensus \$1.42 by 19%; stock –2%
Homebuilding gross margin	28.9% (–320 bps)	29.8% (–150 bps; +90 seq)	Compression slowing; trough watch
Net new orders	1,037 (–6.2%)	1,079 (+19%)	Demand inflection in Q2
Backlog	649u / \$381M (–25/–35%)	681u / \$387M (–24%)	Still eroding; 6–9 mo. revenue visibility impaired
Delivered ASP	\$493k (–6.9%)	~\$450k	Trophy mix shift
Incentives	10.1% of closings rev	8.8% (+180 bps)	Rate buydowns = margin tax
Cancellation rate	7.7%	7.8%	Contained
Active communities	103	108 (+6%)	Supply of selling outlets growing

What the numbers say:

Profitability remains elite for a builder, even while compressing. A 29.8% homebuilding gross margin and 15.7% TTM net margin are peer-leading by a wide margin (nearest peer gross margins sit in the low-to-mid 20s). The question is direction: –320 bps then –150 bps YoY is a trend that must stabilize before the multiple can expand.

The balance sheet is a strategic weapon. 11.2% debt-to-capital (6.1% net) with \$462M liquidity against an ~\$820M 2026 land program means Green Brick is a *buyer* of land and of its own stock (\$150M authorization; \$16.6M executed in H1) while levered peers retrench. In a downturn, this is the company that consolidates.

Cash conversion is the watch item. TTM free cash flow of ~\$112M against \$315M of net income reflects heavy land investment (acquisitions + development). That is growth capex, not leakage — but it means earnings power and cash power diverge while the land bank grows, and it caps near-term buyback firepower.

Book value is the compounding record. \$44.82/share, +16% YoY, with ROE of 16–19% across recent periods. For a builder, book-value growth *is* the long-run return — which is why the old note anchored valuation on price-to-book, not P/E. The rebuild discounts cash instead: book compounds beautifully, but only the cash that escapes the land bank belongs to shareholders.

5 Growth, Moat & Future Projection

Management gives no formal full-year guidance; the closest forward statement is the 2026 land program (~\$400M acquisitions + ~\$420M development). Our forward view therefore rests on the demand and supply facts:

1. **DFW is the demand bedrock.** Dallas-Fort Worth remains the #1 U.S. metro for residential permits (34,008 in H1 2026, still #1 nationally despite –6% YoY), absorbs 100,000+ net new residents a year, and U-Haul ranked it the top mover destination in 2024 and 2025. Median sold price \$405k was flat YoY (June 2026) with 4.4 months of inventory — a balanced market, not a bubble. Green Brick's infill land bank sits directly in the path of this migration.
2. **Trophy is the volume algorithm.** At 51–52% of sales, entry-level spec product converts land to closings fastest and drove the Q2 order inflection (+19%, pace 3.3/mo). Every incremental Trophy community adds units at lower ASP and lower margin — growth with a mix cost. Our 2027 estimates assume closings grow mid-single digits while consolidated margins stabilize around 29%, not recover to 33%+.
3. **Geographic optionality is free upside.** Austin is ramping (1,093-homesite Prairie Winds) and Houston just delivered its first homes. Neither is in our numbers in a major way; both extend the runway beyond DFW concentration.
4. **Captive mortgage adds basis points, not percentage points.** 521 loans in Q2 (+257%) supports pace and captures spread, but financial-services pretax (\$5.7M) is still rounding error next to homebuilding. Value it as a sales enabler, not a profit center.
5. **Capital return compounds the per-share story.** The \$150M buyback authorization is ~5% of market cap; FY2025 retired 1.4M shares (\$83M). With no common dividend, buybacks plus book-value growth are the entire cash-return story — and at 1.48× book, repurchases are value-accretive.

On moat — honestly: Green Brick has **advantages, not a moat**. The advantages are owned infill land in DFW (~80% of revenue from infill/infill-adjacent), structurally superior margins, a fortress balance sheet, and owner-operator alignment. The offsets are a commodity product with no brand pricing power, a 10–20× scale disadvantage versus D.R. Horton and Lennar (purchasing, capital cost), ~12.4 years of owned land concentrating DFW price risk on the balance sheet, and a narrowing margin edge as Trophy grows. This is a well-run cyclical compounder, not a franchise. Price it like one.

Projection (author's base case): 2026E revenue ~\$1.95B with EPS \$6.27 (in line with thin consensus); 2027E closings ~4,150 units at stabilizing margins, EPS \$6.54; book value compounding 10–12% annually via retained earnings and accretive buybacks, reaching ~\$56 by end-2027. No housing recovery is assumed — 30-year rates near 7% persist in the base case, with buydown incentives as a permanent 8–10% cost of sales.

6 Competitive Landscape

U.S. homebuilding is consolidating around national giants; Green Brick competes as a premium regional with the best margins and the smallest scale. Head-to-head (~October 1, 2026):

Company	Price	Mkt cap	TTM P/E	P/B	ROE
Green Brick (GRBK)	\$66.44	\$2.86B	10.0×	1.48×	16.4%

D.R. Horton (DHI)	\$137.06	\$38.3B	13.3×	1.62×	12.6%
Lennar (LEN)	\$82.11	\$19.8B	15.8×	0.91×	6.0%
PulteGroup (PHM)	\$116.35	\$22.3B	11.7×	1.87×	15.2%
Toll Brothers (TOL)	\$136.36	\$12.6B	11.0×	1.48×	14.4%
Taylor Morrison (TMHC)	~\$72.48	~\$6.7B	10.1×	1.08×	11.5%
Meritage (MTH)	\$64.37	\$4.2B	13.4×	0.83×	6.4%
KB Home (KBH)	\$46.54	\$2.8B	13.1×	0.75×	5.9%
Century (CCS)	\$60.16	\$1.7B	13.2×	0.67×	5.2%
LGI Homes (LGIH)	\$47.71	\$1.1B	16.7×	0.52×	3.2%

Prices and multiples via live market data (yfinance, Oct 1, 2026) for GRBK/DHI/LEN/TOL/MTH/KBH/CCS/LGIH; PHM/TMHC per company/aggregator data ~Oct 1, 2026. GRBK book value is company-reported (\$44.82, 6/30/2026); third-party P/B figures using stale book values were discarded.

The read: Green Brick earns the highest ROE in the set and trades at a **discount** P/E (~10× vs 11–16× for most peers) — the small-cap liquidity discount more than offsets the quality premium. Its 1.48× P/B sits mid-pack (below Pulte's 1.87×, above Lennar's 0.93×). Notably, the cheapest P/Bs in the sector (LEN 0.91×, KBH 0.75×, LGIH 0.52×) belong to builders whose ROEs have collapsed to single digits — the market pays for *return on book*, not book itself, which is exactly what our justified-P/B lens formalizes. Green Brick's combination — 16% ROE at 1.48× book — is the healthiest ratio in the table; it is also, per our rebuilt cash-flow DCF, the most overpriced: the cash says \$41, not \$66.66.

7 Valuation — Hardened 10-Year FCF DCF, Fair Value \$41

The old note ran four lenses — justified P/B (\$69), forward P/E (\$72), EV/EBITDA (\$65), earnings-power DCF (\$73) — and converged at \$65–\$73. Every one of them capitalized earnings. That is the leak the hardened rebuild closes: TTM free cash flow was \$112M against \$315M of net income, because the owned-land model that creates Green Brick's margin edge consumes roughly two-thirds of reported earnings in land investment. A multiple of earnings that never becomes cash is a ceiling, not a value. So we keep only the discipline and rebuild: a 10-year scenario free-cash-flow DCF, weighted bear 25% / base 50% / bull 25%, terminal growth ≤2.5% on year-10 FCF at normalized mid-cycle margins.

The 12% base discount is 4.0% risk-free + 1.80 beta × 4.5% equity risk premium — for beta 1.8, DFW concentration, and cyclical. The bear adds 250bp; the bull subtracts 150bp.

Scenario	Fair value	Rev. CAGR	FCF margin (yr-10)	Discount	Terminal g	Assumptions
Bear — \$7.41	\$7.41	−0.5%	4.5%	14.5%	1.0%	Trophy dilutes margins toward peer average; DFW land-price stress; impairments hit book, the old anchor.
Base — \$41.10	\$41.10	+5.0%	8.5%	12.0%	2.5%	Margins stabilize ~29%; Q2 orders convert; land intensity continues; no housing recovery assumed.
Bull — \$74.58	\$74.58	+7.0%	11.0%	10.5%	2.5%	Margins re-accelerate to 31%+ on infill pricing; rate relief revives turnover; land reinvestment moderates.

Scenario	Fair value	Rev. CAGR	FCF margin (yr-10)	Discount	Terminal g	Assumptions
Weighted fair value → \$41	\$41	—	—	—	—	$0.25 \times \$7.41 + 0.50 \times \$41.10 + 0.25 \times \$74.58$; -38.5% vs \$66.66 (Oct 2).

What changed, plainly: the old \$70 priced *earnings power* — what the business earns before it reinvests in the land that makes the earnings possible. The new \$41 prices *cash power* — what is left for shareholders after that reinvestment. For a self-developing builder, the two are not close, and the gap widens exactly when growth is fastest.

Note the asymmetry: even the bull case (\$74.58) sits just 12% above the \$66.66 quote and falls below it at the 12% base discount — and the bear (\$7.41) genuinely hurts, 89% below the price. There is no entry price today that pays a buyer for taking the left tail.

Structural caveat, disclosed: the market prices builders on P/E and P/B, and on those lenses Green Brick looks fairly valued at 10× earnings and 1.48× book. If that lens persists, this DCF understates market-clearing value — the stock can stay expensive for as long as buyers pay earnings multiples. Our view is that the market's lens is the mispricing: \$41 is where the cash goes, not where the multiple sits. Sell the earnings multiple; the cash will not follow it.

Five years: a triple, then a 22% drawdown to fair value

GRBK monthly close, Oct 2021 – Oct 2026 (\$)

From ~\$26 in late 2021 to \$66 today (+155%), with a 2022 drawdown to ~\$20 and a 2026 peak at \$83. The current price sits just above the 52-week low — but, per our hardened DCF, ~38% above what the cash supports. Source: Yahoo Finance.

8 Key Risks

Margin dilution from the Trophy mix (the central risk). If entry-level mix and 9–10% incentives grind homebuilding gross margins from ~30% toward the low-20s peer average, both our P/B and P/E lenses break to the downside — the \$48 bear case. Watch Q3 margins (Nov 4) for stabilization.

Mortgage-rate sensitivity. 30-year rates near 7.2% force the buydown-and-incentive treadmill; any spike directly taxes margins, while sustained elevation caps the order recovery that Q2 started.

DFW concentration. The overwhelming majority of volume is Texas, concentrated in Dallas-Fort Worth. A regional demand shock or land-price decline is a company-level event — and with ~12.4 years of owned supply, impairments would strike book value, the very anchor of our valuation.

ASC 606 restatement overhang. The amended 10-K restating FY2023–2025 income statements was still pending at publication. Economics are unchanged, but restatements invite SEC scrutiny and class-action attention, and the proxy's clawback provision is now live context.

Blockholder overhang. Greenlight (~22%) holds effective registration rights; a partial exit by the company's largest holder would pressure the shares well beyond fundamentals.

Backlog erosion and no guidance. Backlog down 24% YoY with no formal 2026 guidance leaves the revenue bridge to 2027 under-identified; if Q2's order strength proves seasonal, 2027 estimates fall.

Thin coverage, high beta. One to two analysts, 6.3% short interest, beta 1.8 — expect outsized moves around prints (the stock fell on a 19% Q2 EPS beat).

No common dividend. Total return depends entirely on price appreciation plus buybacks; there is no yield cushion while you wait.

9 Catalysts, Recommendation & What Could Change Our Mind

Catalysts over the next 12 months: (1) **Q3 earnings (~Nov 4)** — the single most important print: margin stabilization would argue against the bear case, while a further slide through 28% gross margin would confirm it; (2) **Co-CEO transition (Oct 15)** — Dolson's start formalizes succession; (3) **amended 10-K** — clearing the restatement removes the overhang; (4) **Houston/Austin ramp** — first Houston deliveries just began; (5) any Fed easing that revives turnover and lets buydown incentives roll off.

Recommendation: SELL, \$41 target. This is the best-run, highest-margin, best-capitalized small-cap builder we cover — and at \$66.66 it is 38.5% above what its cash flows are worth. A 10-year scenario FCF DCF (12% base discount, terminal 2.5% on normalized margins) prices the equity at \$41; even the bull case barely clears the quote, and the bear (\$7.41) is a genuine 89% drawdown. You are paying a multiple of earnings that the land bank consumes before it reaches you. We would upgrade to HOLD on weakness toward our **\$41** fair value and to BUY only below ~\$34, where the base case offers real upside. Above ~\$50 we stay SELL — the base-case downside still exceeds 20%. Risk is Medium-High: beta 1.8, DFW concentration, and the Trophy margin question are all still live.

What could change our mind: free-cash-flow conversion recovering toward 50%+ of net income — the variable our entire downgrade turns on; homebuilding gross margin stabilizing above 29.5% with backlog units turning positive (bearish pressure eases — re-rate toward base); margins sliding through 28% or incentives breaching 11% (the \$7.41 case takes over); a Greenlight partial exit (technical, not fundamental — a buying opportunity, not a thesis break).

Methodology & sources. Company financials and operating metrics from SEC filings and businesswire press releases (Q1 2026, Q2 2026, Q3 2025, FY2025, FY2024 results; 2026 proxy; FY2025 10-K lot table); market data via live Yahoo Finance quotes, October 1, 2026 (peer multiples verified same-day; PHM/TMHC per company and aggregator data ~Oct 1, 2026); DFW housing data per Census/CBRE via secondary sources; Greenlight position per September 2026 13F analysis; consensus estimates per WallStreetZen/TipRanks/TradingView (1–2 analysts — low conviction, flagged as such). All 2026E/2027E figures beyond cited consensus are the author's. Valuation detail in *valuation.py* / *valuation_output.json* (v1) and *valuation_output_v2.json* (hardened v2 scenario DCF used in this note).
