

COMCAST CORPORATION

Comcast Corporation (NASDAQ: CMCSA)

Deep-value connectivity compounder at a 52-week low: 4.3× EBITDA, 6% yield, and a mid-2027 spin catalyst

RECOMMENDATION		Initiation of coverage-style note	
BUY			
12-month price target	Current price (9/26/26)	Implied upside	Risk rating
\$40.00	\$21.73	+84% (+90% w/ dividend)	Medium-High
Bear case	Bull case	Dividend yield	Next catalyst
\$18.00	\$55.00	~6.1% (\$1.32 annualized)	Q3'26 results 10/22/26; NBCU+Sky spin ~mid-2027

Investment thesis in one paragraph. Comcast trades at its 52-week low (~\$21.7, -26% over one year) at 4.3× EV/EBITDA — roughly half the multiple of cable peers — because the market has priced its residential broadband business for permanent decline. That fear is half right: Comcast is losing broadband subscribers to fiber and fixed wireless, and it is sacrificing ARPU to defend share. But the price now embeds the bear case. The company still generates ~\$15–17B of annual free cash flow (a ~20% FCF yield), pays a 6% dividend with a ~31–43% payout ratio, owns the highest-margin broadband footprint in the U.S. plus a wireless business adding a record ~450K lines a quarter, and has two idiosyncratic catalysts: Peacock just posted its first profitable quarter, and the announced tax-free spin of NBCUniversal + Sky (~mid-2027) will leave a pure-play connectivity company that should re-rate toward cable-peer multiples. Our \$40 target blends DCF, SOTP and multiple-based work and implies 6.0× 2026E EBITDA — still a discount to peers. **BUY.**

Analyst certification & disclosures on last page. This is research analysis, not personalized investment advice.

1. What the company does

Comcast is the largest U.S. residential broadband provider and a diversified media conglomerate, currently mid-way through a two-step breakup. On **January 2, 2026** it completed the tax-free spin of its legacy cable networks (USA, CNBC, MSNBC—renamed MS NOW, SYFY, E!, Golf Channel) into **Versant Media Group (VSNT)**. On **June 29, 2026** it announced a second tax-free separation: **NBCUniversal + Sky** into a standalone public company (target close ~mid-2027). Post-deals, Comcast becomes a **pure-play connectivity company** (Xfinity broadband/wireless/business services, ~65M U.S. homes and businesses passed); the spun media company keeps Universal Pictures, NBC/Telemundo/Bravo, Peacock, the theme parks including Epic Universe, Sky, and a sports-rights stack (NFL, NBA, Olympics) running through 2032–2036. Comcast will retain up to 19.9% of the new NBCU for up to a year, then monetize it tax-efficiently. Leadership: Mike Cavanagh becomes CEO of new NBCU; former CFO Michael Angelakis returns to lead Comcast; Brian Roberts (chairman, ~33% voting control via supervoting Class B) stays involved with both.

Comcast reports **five** segments under two divisions. Connectivity & Platforms (C&P;) is the profit engine at **86.6% of 2025 adjusted EBITDA** with ~40% margins. Full-year 2025 (includes Versant in Media; 2026 periods are recast to exclude it):

Segment	2025 revenue	2025 adj. EBITDA	Margin	Q2'26 revenue	Q2'26 EBITDA
Residential Connectivity & Platforms	\$70,704M	\$26,653M	37.7%	\$17,124M (–4.0%)	\$6,448M (–8.0%)
Business Services Connectivity	\$10,237M	\$5,725M	55.9%	\$2,671M (+3.7%)	\$1,516M (+5.0%)
C&P; total	\$80,940M	\$32,377M	40.0%	\$19,795M (–3.0%)	\$7,964M (–5.7%)
Media (NBC, Telemundo, Bravo, Peacock, Sky nets)	\$27,090M	\$3,196M	11.8%	\$5,691M (+25.3%*)	\$708M (+3.7%)
Studios (Universal, DreamWorks, Illumination)	\$11,286M	\$1,099M	9.7%	\$3,040M (+25.0%)	\$202M
Theme Parks (Orlando, Hollywood, Osaka, Beijing)	\$9,836M	\$3,080M	31.3%	\$2,413M (+2.7%)	\$609M (–5.1%)
Consolidated	\$123,707M	\$37,384M	30.2%	\$29,940M (–1.2%)	\$8,902M (–13.4%)

*Q2'26 Media revenue includes ~\$440M of incremental FIFA World Cup 2026 revenue. Q2'26 beat revenue consensus (\$29.94B vs \$29.27B) and adjusted EPS (\$1.04 vs \$0.97). Sources: Comcast Q2 2026 earnings release (7/23/2026); FY2025 10-K.

Product deep-dive: where the value lives

- **Xfinity Internet (the crown jewel, under attack).** ~28.5M domestic residential broadband subscribers. Since June 2025: four national everyday-pricing tiers (300 Mbps \$40–\$70/mo through 2 Gbps \$100–\$130/mo), gateway included, unlimited data, 5-year price lock, plus a free Xfinity Mobile line for a year. Strategy is explicit: **trade ARPU for subscriber retention** — broadband ARPU fell 3.8% YoY in Q2'26 and broadband revenue fell 5.5%, but net losses narrowed (Q1'26 –65K vs –183K prior year; Q2'26 –167K vs –201K). Network moat: DOCSIS 4.0 now covers millions of homes with upgrade economics of **<\$200 per home passed** vs \$500–1,000 for fiber builds; ~60% of footprint on mid-split/virtualized plant. The problem: AT&T; added 646K broadband subs in Q2'26 (367K fiber), T-Mobile 520K and Verizon 348K via fixed wireless — while Comcast and Charter each lost ~170K. CFO warned mid-September 2026 of 'no sign of easing' in Q3 attrition.
- **Xfinity Mobile (the offset).** MVNO on Verizon's network, relaunched April 2026 (\$30/mo Select, \$45/mo Plus; internet subscription required). **10.19M lines at 6/30/26 — first time past 10M — with a record +448K net adds in Q2'26** and +1.66M over twelve months; wireless service revenue +14.2% to \$1.007B in the quarter. Only ~7% penetrated of the addressable base (~14–16% of the broadband base). This is the convergence play: cheap/free mobile reduces broadband churn. H2 2026 is the test — free-year promo lines must convert to paying ('significant majority' expected). Combined, cable MVNOs are now a fourth wireless force (~22M+ lines) growing faster than the Big 3 in postpaid adds.
- **Peacock (inflection).** 48M paid subs (+2M in Q2'26 on NBA/FIFA/Love Island USA); fourth price hike in four years (Premium now \$12.99/mo). **First-ever profitable quarter: +\$189M EBITDA on \$1.9B revenue (+54%) in Q2'26**, a \$290M swing YoY — though sports-spiky (Q4'25 –\$552M on NBA launch costs). Cumulative losses since 2020 exceed \$11B, and management commits to no firm breakeven date ('will vary quarter by quarter'). Structural bull case: exclusive U.S. Olympics rights through 2036 with LA 2028 as the biggest subscriber-acquisition event in its history; NBA rights (~\$2.5B/season) are the near-term margin drag (NBCU expects \$0.5–1.4B annual losses in early years). Peacock rides with the spun NBCU.
- **Sky (shrinking to core).** UK/Ireland/Italy only after the May 2026 sale of Sky Germany to RTL; 17.5M international relationships, flat. Agreed to buy ITV's broadcast + streaming unit for £1.6B (June 2026) — a UK scale play. Rides with the spun NBCU.
- **Studios — Universal is #1 in 2026.** First studio past **\$5B global box office in 2026** (~26% share, 29% ahead of its full-year 2025). Nolan's *The Odyssey* (\$1.68–1.73B) is Universal's highest-grossing film ever; five of 2026's top-10 films are Universal/Focus. Cyclical and low-margin (~10%), but a real asset inside the spin.
- **Theme parks — Epic Universe is the growth engine.** Opened May 2025 in Orlando (5 lands); drove FY2025 parks revenue +14.2% to \$9.84B and EBITDA +4.5% to \$3.08B (31.3% margin), including the first \$1B EBITDA

quarter (Q4'25). Q2'26 softened (–5.1% EBITDA on Orlando + international softness; ex-Epic, Universal Orlando attendance fell ~12% per Placer.ai while Disney gained). Epic itself meets expectations with strong per-capita spend; a third Dark Universe ride is permitted and Christmas overlays launch Nov 2026. Parks ride with the spun NBCU — a high-multiple asset (Disney-like parks command ~10×+) that the market currently buries inside a 4.3× conglomerate multiple.

- **Business Services (the quiet compounder).** \$10.2B revenue, +5.5% in 2025, **55.9% EBITDA margins** — the highest in the company; Nitel acquisition (April 2025) added mid-market heft. Stays in RemainCo and deserves a premium multiple.

2. Financial situation

Revenue has been flat for three years (~\$122–124B); the mix is deteriorating at the top line of the core segment while cash generation remains enormous. Two adjustments matter for reading the numbers: FY2025 GAAP net income (\$20.0B) includes a **\$9.4B pre-tax Hulu-sale gain** (\$1.90/share), and FY2025 free cash flow (\$19.2B, a record) includes a **~\$2.0B one-time cash-tax benefit** management says will not recur in 2026. Use adjusted EBITDA (~\$37.4B FY2025; TTM ~\$34.4B) and normalized FCF (~\$15–17B) as the analytical base — not Yahoo-style EBITDA, which sweeps in below-the-line gains.

\$ millions	FY2021	FY2022	FY2023	FY2024	FY2025	TTM (Q3'25–Q2'26)
Revenue	116,385	121,427	121,572	123,731	123,707	124,905
Adjusted EBITDA	34,708	36,459	37,633	38,069	37,384	34,398
Adj. EBITDA margin	29.8%	30.0%	31.0%	30.8%	30.2%	27.5%
Adjusted EPS	\$3.23	\$3.64	\$3.98	\$4.33	\$4.31	\$3.79
Free cash flow	17,089*	12,646	12,962	12,543	19,235**	17,774
FCF margin	14.7%	10.4%	10.7%	10.1%	15.5%	14.2%

*FY21 incl. ~\$2.3B one-timers. **FY25 incl. ~\$2.0B one-time cash-tax benefit. Sources: company releases; yfinance.

Balance sheet: levered, but long-dated and investment-grade

Metric	Value
Total debt (12/31/25) / (6/30/26)	\$98.9B → ~\$90.4B (Versant took \$3B; \$2.25B upstreamed to redeem notes)
Cash → net debt	~\$9.5B → ~\$89.5B (YE25); ~\$83–90B mid-2026
Net leverage	~2.39× YE25 → ~2.2× mid-2026 (adj. EBITDA)
Interest coverage	~8.5×
Ratings	A3 (Moody's) / A– (S&P); both on review since 6/29/26 — diversification loss + broadband losses
Maturity profile	Long-dated to 2055; ~\$6B due <12 mo; effective rate ~4.1%
Intangibles weight	Goodwill \$61.5B + franchise rights \$59.4B = ~45% of assets

Capital returns: the 6% yield is the thesis's floor

Dividend: **\$1.32 annualized (\$0.33/quarter)**, ~6.1% yield at \$21.73 — 17 straight annual increases through Jan 2025 (+6.5%), but **no increase in Jan 2026** (held flat; dividend policy for each post-split company TBD). Payout is comfortable at ~31% of FY25 adjusted EPS (\$4.31) and ~43% of depressed 2026E (\$3.50), and ~8–9% of FCF — the dividend is well covered unless the split rebases it. Buybacks: \$13.3B (2022) → \$11.3B → \$9.1B → \$7.2B (2025, –5% share count) → **paused June 29, 2026** pending the separation — removing a source of share-price support, but preserving flexibility for the split. 2025 total return to holders: \$11.7B (\$4.9B dividends + \$6.8B buybacks).

Operating KPIs: the battleground in one table

KPI (000s)	FY2023	FY2024	FY2025	Q2 2026
Domestic broadband subs	32,253	31,842	31,255	28,486 resi (–167K qtr)
Domestic video subs	14,106	12,523	11,270	10,668 (–280K qtr)
Wireless lines	6,588	7,826	9,305	10,187 (+448K, record)
Peacock paid subs	—	36,000	44,000	48,000; 1st profit +\$189M

Read-through: the legacy bundle (broadband + video) is shrinking ~1M+ subs/year combined; wireless (+1.66M lines LTM) and Peacock are the offsets. Broadband penetration of homes passed fell 49.8% → 47.6% in one year.

3. Competition: losing the land war, winning the air war

- **Broadband — share loss is the #1 risk.** Q2'26 net adds tell the story: AT&T; +646K (367K fiber + 279K fixed wireless), T-Mobile +520K, Verizon +348K vs **Comcast –167K and Charter –172K**. Fiber overbuilders (AT&T; passing ~40M homes by YE26, ~60M by 2030 incl. the \$5.75B Lumen Mass Markets deal) and fixed wireless (T-Mobile 9M+, Verizon ~5–6M, AT&T; 2M installed bases) are structurally taking share with \$30–40/mo offers Comcast calls 'irrational.' Cable's defense — DOCSIS 4.0 at <\$200/home vs \$500–1,000 fiber builds — is real but is a cost story, not a growth story. Penetration keeps sliding.
- **Video — the bleeding is margin-accretive.** U.S. pay-TV lost 2.03M subs in Q1'26 alone (62.2M remaining); even vMVPDs shrank (YouTube TV –350K, its worst quarter). Comcast video is down to 10.67M from a ~22.5M peak. But video is a low-margin programming pass-through — subscriber losses *help* margins. The Versant spin already removed the worst cable-network decliners. The damage that matters is broadband, where video bundling used to reduce churn.
- **Wireless — cable is the disruptor.** Q2'26 postpaid phone adds: T-Mobile ~750K, AT&T; 432K, **Comcast +448K**, Charter +406K, Verizon 184K. Cable MVNOS (~22M+ combined lines, ~2% churn vs 0.86–0.92% for the Big 3) are the fastest-growing 'carriers' in America — riding the Big 3's own networks. The strategic logic is defensive (cut broadband churn via convergence) but the P&L; contribution is increasingly real (\$1B+/quarter service revenue, +14%).
- **Streaming — last across the profitability line, but across it.** Netflix (\$12.6B rev, 33% margin), Disney SVOD (\$712M op income), WBD streaming (\$512M EBITDA, 140M+ subs), Paramount+ (81.6M subs, profitable) all scaled earlier; Peacock (48M) just posted its first profit. Scale disadvantage persists, but the NBA + Olympics rights give it a differentiated live-sports funnel nobody else replicates.
- **Parks & studios — strong, cyclical, and mispriced inside the conglomerate.** Disney's Experiences did \$9.9B (+10%) in its latest quarter with attendance +3% while Universal softened — Disney is currently outperforming. Universal's 2026 studio slate (#1 share, >\$5B) is exceptional but hit-driven. Both assets will trade at higher multiples inside the spun NBCU than buried in Comcast's 4.3×

4. Growth outlook & catalysts

- **2026–2027: the trough.** Consensus (Zacks, 9/24/26): FY2026E revenue \$120.4B (–2.7%), adjusted EPS \$3.50 (–19%) — the street expects the broadband/margin trough *this year*. Our normalized FCF base is ~\$15.5B for 2026 (vs \$17.8B TTM, which mixes pre-spin quarters and the one-time tax benefit).
- **Catalyst 1 — the NBCU + Sky spin (~mid-2027).** This is the core of the re-rating thesis. RemainCo becomes a pure-play U.S. connectivity company (broadband + wireless + business services, ~40% EBITDA margins, 55%+ in business services) — an asset class the market pays 6–7× EBITDA for (Charter). Today the whole company trades at 4.3×. The stub NBCU (studios, parks, Peacock, Sky, sports rights) goes to shareholders as a separate, higher-multiple media asset. Execution risks are real: the debt split, each company's dividend policy, and the

tax-free qualification (requires ≥ 1 year of independence, constraining near-term M&A;) are all TBD. Buybacks stay paused until close.

- **Catalyst 2 — mobile conversion (H2 2026).** ~1M+ free-year promo lines convert to paying; management expects a 'significant majority' to stick. Every 500K retained lines at ~\$30 ARPU is ~\$180M of high-margin annual service revenue and, more importantly, lower broadband churn.
- **Catalyst 3 — Peacock's path from -\$11B to breakeven.** Q2'26's first profit needs to become a pattern ex-sports quarters. LA 2028 Olympics is the structural prize.
- **Catalyst 4 — Epic Universe ramp + 2026 film slate cash conversion.** Parks EBITDA should rebuild as Epic annualizes and Orlando normalizes; studio profits are lumpy but 2026 is a record year.
- **What 'growth' realistically means here:** this is not a growth stock — it is a **cash-cow re-rating** story. Our base case has FCF roughly flat-to-up (mobile + Peacock + parks offsets vs broadband ARPU erosion), with the return coming from multiple expansion (4.3 $\times$ $\rightarrow$ ~6 $\times$) plus a 6% dividend, not from earnings growth. Underwrite it like a utility with a catalyst, not like a compounder.

5. Valuation: four lenses, one conclusion

We value Comcast on (i) a scenario-weighted FCFF DCF, (ii) a sum-of-the-parts, (iii) peer multiples, and (iv) a dividend discount as a floor. Net debt \$85B (midpoint of the ~\$83–90B mid-2026 range), 3,539M shares, WACC 6.25% (CoE 8.3% on beta 0.70 / 5.0% risk-free / 4.75% MRP; after-tax cost of debt 3.9%; ~52% debt weight at market values — the leverage that makes the WACC this low is itself a risk).

Lens 1 — FCFF DCF with scenarios (primary, 45% weight)

Scenario	2026–2030 FCF (\$B)	Terminal g	EV	Equity value/share
Bear: broadband erosion accelerates, ARPU keeps falling	14.5 $\rightarrow$ 11.1	–1.5%	\$158B	\$21
Base: FCF stabilizes; mobile/Peacock/parks offset broadband	15.5 $\rightarrow$ 17.0	+0.5%	\$287B	\$57
Bull: turnaround works; spin re-rates; Peacock sustains profit	16.0 $\rightarrow$ 19.9	+1.5%	\$389B	\$86

The bear case (–1.5% terminal decline, leverage never delevers) is worth roughly **today's price** — i.e., the market is pricing permanent decline. Our base case assumes only that FCF stops shrinking: no heroics. WACC sensitivity on the base case: 5.5% $\rightarrow$ \$69; 7.0% $\rightarrow$ \$48; 8.0% $\rightarrow$ \$38.

Lens 2 — Sum-of-the-parts (25% weight)

The conglomerate discount is the point: each piece is worth more than 4.3 $\times$.

Asset	2026E EBITDA base	Multiple	EV
Residential Connectivity & Platforms	\$26.5B	6.5 $\times$ (cable peer)	\$172B
Business Services Connectivity	\$5.7B	8.0 $\times$ (premium: 56% margins, growing)	\$46B
Media ex-Versant (NBC/Bravo/Peacock/Sky nets)	~\$3.0B	8.0 $\times$	\$24B
Studios (Universal)	\$1.1B	8.0 $\times$ (cyclical discount)	\$9B
Theme Parks	\$3.1B	10.0 $\times$ (Disney-comparable)	\$31B
Corporate / other drag			–\$10B
Total EV $\rightarrow$ equity/share (net debt \$85B)			\$272B $\rightarrow$ ~\$53

Haircut variant (residential cable at 5.5 $\times$, no re-rating): ~\$45/share. Even the haircut is 2 $\times$ the current price — the conglomerate discount plus trough sentiment explains the gap.

Lens 3 — Peer multiples (20% weight)

Multiple	Base	Implied value/share
6.0× EV / 2026E adj. EBITDA (\$34B)	Cable-peer trough	\$33.6
7.0× EV / 2026E adj. EBITDA	Cable-peer mid	\$43.2
8× forward P/E on depressed 2026E adj. EPS (\$3.50)	Distressed multiple on trough earnings	\$28.0
11× forward P/E	Normal cable/media blend	\$38.5
Current: 4.3× EV/EBITDA, ~6.2× forward P/E, ~20% FCF yield	Where the stock sits today	\$21.7

Lens 4 — Dividend discount (floor, 10% weight)

At an 8.3% cost of equity, the \$1.32 dividend supports **\$15.90 (0% growth) to \$21.40 (2% growth)** on dividends alone — before any credit for buybacks (paused, but \$7.2B in 2025), the spin, or terminal value. The dividend is the valuation floor, and it is well covered (~8–9% of FCF). The main threat to the floor is a dividend rebase at the mid-2027 split, not the operating performance.

Blending to the \$40 target

Lens	Value/share	Weight	Contribution
DCF bear / base / bull (20/55/25)	\$21 / \$57 / \$86	45%	$\$51.4 \times 0.45 = \23.1
SOTP (haircut \$45, full \$53 ↔ \$49 mid)	\$49	25%	\$12.3
Peer multiples (6× EBITDA \$34 + 11× P/E \$39 ↔ \$36 mid)	\$36	20%	\$7.2
DDM floor	\$19	10%	\$1.9
Model-blended fair value			~\$44.50

We set the **12-month target at \$40** — a discount to the \$44.50 model blend — to reflect (a) execution risk on the broadband turnaround the CFO just warned about, (b) the TBD debt split and dividend policy at the mid-2027 spin, and (c) the paused buyback removing price support. \$40 implies **6.0× 2026E EV/EBITDA and 11.4× 2026E adjusted EPS**: a partial re-rating toward (still below) cable peers, plus the 6% dividend for a ~90% total-return profile. Bear \$18 (KeyBanc's \$18 Sell thesis: broadband losses don't stabilize, dividend rebased at split) / Bull \$55 (SOTP realized cleanly, Peacock sustains profit, mobile converts). Street consensus sits at Hold with a ~\$28–29 average target — we are materially above the street, which is the nature of a trough multiple call.

6. Key risks

- **Broadband competition (high).** The core risk. Fiber overbuilds + fixed wireless are taking 1M+ net adds/quarter industry-wide while cable loses share; Comcast is defending with price cuts that compress ARPU (–3.8%) and EBITDA (–8% in C&P;). If Q3–Q4'26 losses don't stabilize, the trough-multiple thesis breaks and \$18 is in play.
- **Split execution (medium-high).** The mid-2027 spin's debt allocation, dividend policies, and standalone NBCU economics are unknown; tax-free status constrains M&A; for a year post-close. A bad split (too much debt on RemainCo, dividend cut) unwinds the re-rating.
- **Leverage (medium).** ~2.2× net debt/EBITDA is manageable at 8.5× coverage, but Moody's/S&P; have both ratings on review — a downgrade raises funding costs on a \$90B debt stack and could force deleveraging ahead of shareholder returns.
- **Video & programming (medium, fading).** Cord-cutting continues (~280K/quarter); largely margin-accretive and partly spun away with Versant. The residual risk is broadband-churn linkage, not video economics.

- **Sports-rights & content costs (medium).** NBA ~\$2.5B/season with expected \$0.5–1.4B annual losses in early years; Olympics through 2036 is a \$10B+ commitment. These sit in the spun NBCU, but they burden consolidated FCF until the split.
- **Regulatory (low-medium).** BEAD build conditions, pole-attachment costs, and any price-regulation overhang on subsidized builds; net-neutrality noise. Manageable, but capex-relevant.
- **Cyclical (low-medium).** Theme parks and advertising are discretionary; Orlando softened in summer 2026. The 6% dividend cushions, but a recession would hit parks/media EBITDA first.

7. Recommendation

BUY, \$40 target (+84%; ~90% total return with dividend), Medium-High risk.

Comcast is a textbook deep-value situation with a catalyst: a 4.3× EV/EBITDA multiple that prices the broadband business for permanent decline, a ~20% free-cash-flow yield and 6% dividend that pay you to wait, and a mid-2027 spin that converts a conglomerate discount into two pure-plays the market will price separately. The bear case is fully in the price — our bear DCF is \$21, essentially the current quote — while the base case (\$57 DCF, \$49 SOTP mid) requires only that free cash flow *stops shrinking*, which mobile (+448K record adds), a first-time-profitable Peacock, and an Epic Universe ramp make plausible. We haircut the model blend to \$40 for split-execution and broadband-turnaround risk, and we are above the street's ~\$28–29 Hold consensus because trough multiples on trough earnings are where the mispricing lives.

What to watch

- **October 22, 2026 — Q3 results:** broadband net adds vs the CFO's 'no sign of easing' warning; any stabilization is the single most important data point for this thesis.
- **H2 2026:** free-year Xfinity Mobile lines converting to paid; Peacock profitability ex-sports quarters.
- **H1 2027:** spin details — debt split, dividend policies, Form 10 filing for the new NBCU.
- **Downside stop:** if broadband losses re-accelerate past –250K/quarter *and* ARPU falls further, revisit — that is the bear-case path to \$18.

Positioning note

Size this as a **value/catalyst position, not a compounder**: the return is multiple re-rating plus dividend, realized around the mid-2027 spin. It pairs naturally with quality compounders (it will not behave like one). Reinvested dividends at a 6% yield materially add to the ~90% total-return profile if the re-rating takes the full twelve months.

Disclosures & methodology. Valuation as of September 28, 2026; share price \$21.73 (9/26/26 close). Models: FCFF DCF (WACC 6.25%, scenario terminal growth –1.5%/+0.5%/+1.5%), SOTP at peer multiples, forward P/E and EV/EBITDA cross-checks, Gordon-growth DDM floor. Net debt ~\$85B (mid-2026 estimate); 3,539M diluted shares. Segment and KPI data from Comcast Q1/Q2 2026 earnings releases and FY2025 10-K; consensus figures from Zacks and aggregator panels (late Sept 2026); ratings/actions (KeyBanc Sell \$18, Citi Buy \$28, MS Hold \$27, JPM Hold \$29, Wells Fargo Sell \$23, MoffettNathanson Buy \$52) as reported by market data providers.
